

SEEKING CONSISTENT OUTCOMES

Most financial plans assume a consistent return. As you can see below, over time the S&P 500 Index has proven to be far from consistent.

Our time-tested hedged equity approach, the Defined Risk Strategy, seeks to provide equity market participation while mitigating volatility and market risk.

The graphs below show fifteen, 10-year investment periods. The first period is 1/1998 to 12/2007; the last period is 1/2012 to 12/2021.

PURSuing PEACE OF MIND

The markets can be unpredictable. Fewer surprises may more consistently lead to desirable investment outcomes.

Retirees' Biggest Fear: Running Out of Money

Most people plan to be retired for at least 10 years and need their money to last.

This table shows how the Swan Defined Risk Strategy (DRS) provided consistent returns across successive 10-year periods. Each period includes at least one bull market and one bear market, except for two (January 2009 through December 2018 and January 2010 through December 2019).

These figures assume no portfolio withdrawals.

Helping Make Money Last in Retirement

Achieving desired investment outcomes requires a long-term plan that enables you to remain invested and to seek consistent returns over time.

The DRS is designed with the goal of producing consistency of long-term returns and achieving desirable outcomes.

Consider making the DRS a core component in your client's financial plan.

The Swan Defined Risk US Large Cap Composite demonstrates the performance of non-qualified assets managed by Swan Global Investments, LLC since inception. It includes discretionary individual accounts whose account holders seek the upside potential of owning stock, and the desire to eliminate most of the risk associated with owning stock. The Composite relies on LEAPS and other options to manage this risk. Individual accounts own S&P 500 exchange traded funds and LEAPS associated with the exchange traded funds as well as multiple other option spreads that represent other indices that are widely traded. The Defined Risk Strategy was designed to protect investors from substantial market declines, provide income in flat or choppy markets, and to benefit from market appreciation. Stock and options are the primary components of the strategy.

The benchmarks used for the Swan Defined Risk US Large Cap Composite are the S&P 500 Index, which consists of approximately 500 large cap stocks, and a 60/40 blended composite, weighted 60% in the aforementioned S&P 500 Index and 40% in the Barclays US Aggregate Bond Index. The 60/40 is rebalanced monthly. The Barclays US Aggregate Bond Index is a broad-based flagship benchmark that measures the investment grade, US dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, MBS (agency fixed-rate and hybrid ARM pass-throughs), ABS and CMBS (agency and non-agency). The S&P 500 Index is often used as a proxy for the overall U.S. equity market. Indexes and other benchmarks used herein are generally unmanaged and have no fees or expenses. An investment cannot be made directly in an index or some of these benchmarks. Swan’s investments may consist of securities which vary significantly from those in the benchmark indexes listed above and performance calculation methods may not be entirely comparable. Accordingly, comparing results shown to those of such indexes and benchmarks may be of limited use. Additional information regarding Swan’s composite policies and procedures for calculating and reporting performance returns is available upon request.

All Swan performance results have been compiled solely by Swan Global Investments and are unaudited. Other performance return figures indicated in this material are derived from what Swan believes to be reliable sources (S&P 500 index), but Swan does not guarantee its reliability.
